If you have type 1 diabetes in your family, you are in a unique position to help prevent this disease. The first step is...

Through the Pathway to Prevention Study, TrialNet offers a simple blood test at no cost, for relatives of people with type 1 diabetes. The test can detect autoantibodies that show an increased risk, years before symptoms appear.

Since relatives are 15 times more likely to develop type 1, knowledge is power. We will work with you to make the next proactive step from the results. Prevention trials are under way for eligible relatives who test at higher risk.

At the University of Florida, type 1 diabetes research is our core mission. It takes a team effort to make a difference - families, physicians, researchers, and advocates working side by side. We need people to take part in clinical trials - help us find ways to delay or prevent the disease and bring a better future to people affected with type 1 diabetes.

**WITHOUT PREVENTION
THERE CAN BE NO CURE**

GET TESTED

You can make a difference- help us find ways to bring a better future to people with T1D
