

THE POWER OF US: Accelerating Cure Research JDRF Center of Excellence in Northern California

At JDRF, we have invested 50 years of innovative research to understand and defeat type 1 diabetes (T1D), so we can cure this complex disease while we continue to improve lives along the way. Our loved ones with T1D deserve nothing less.

JDRF's Centers of Excellence are a game-changing component of our strategy to accelerate promising cure treatments as quickly as possible. The complexity of T1D means that solutions will likely come from a variety of fields within diabetes and beyond.

Leveraging Collaborations and Specialized Excellence

Through the JDRF Center of Excellence in Northern California, our organization is maximizing our unique ability to bring world renowned scientists together from Stanford University and the University of California San Francisco (UCSF) to accelerate progress of beta cell therapies, cell biology and immunology.

Designed For Speed

The JDRF Center of Excellence in Northern California offers a highly dynamic and nimble framework to promote discovery with maximum speed. By providing researchers with long-term funding, the Center removes the red tape, giving scientists the freedom for creativity and agility to change directions as needed.

Funding

JDRF has already raised \$5 million to support this promising work, but \$3 million remains to fund this Center for its first five years.

We are excited to announce that individual gifts of \$10,000 or more can be directed to fund the JDRF Center of Excellence in Northern California.

The Power of Us during the COVID-19 crisis

Since day 1, our philosophy at JDRF has been to accept the donations entrusted to us, by supporters like you, and put them immediately to work by investing in innovation and talented researchers around the world. This approach has allowed us to advance T1D science and pursue tangible, promising studies for breakthroughs throughout our 50-year history.

COVID-19 has dramatically changed the T1D landscape and our expected capacity to scale support. That being said, we remain laser focused on developing cures for T1D and raising funds to support our most innovative projects such as the JDRF Center of Excellence in Northern California. We cannot slow down our fight to cure T1D.

A gift from you today will protect this cure accelerator. We invite you to join us with a 100% tax deductible Fund A Cure donation, or a directed gift to JDRF research, to benefit the JDRF Center of Excellence in Northern California.
