RIDES TO CURE DIABETES

WHAT IS TYPE 1 DIABETES?

Type 1 diabetes (T1D) is an autoimmune disease in which a person's pancreas stops producing insulin, a hormone people need to get energy from food. T1D strikes both children and adults, and its onset has nothing to do with diet or lifestyle. There is currently nothing you can do to prevent it, and there is no cure.

T1D FACTS AND FIGURES

Less than one-third of people with T1D in the U.S. are achieving target blood glucose control levels⁶

LIFE WITH T1D

Living with T1D is a constant balancing act. People with T1D must regularly monitor their blood-sugar levels, inject or continually infuse insulin through a pump, and carefully regulate insulin doses with eating and activity 24 hours a day.

TURNING TYPE ONE INTO TYPE NONE

T1D is a serious and stressful disease to manage. JDRF funds research to deliver new treatments and therapies that make day-to-day life with T1D easier, safer and healthier until we can prevent and one day cure the disease.
